ES - CRUMBLER

GENERAL DESCRIPTION

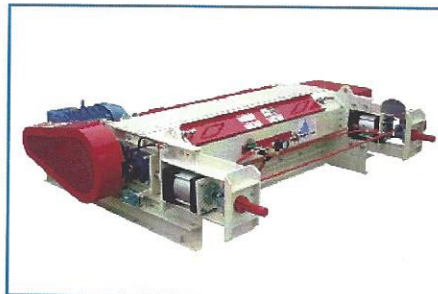

MILPRO pellet crumblers are designed to break pellets into particles of an homogenous size distribution and create a minimum amount of fines. The roll gap is set with only one hand wheel that controls a pair of mechanically-connected screw jacks to guarantee roll parallelism. This mechanism can be driven electrically. Two-way air cylinders with pressure regulator and relief valves maintain roll pressure but releases it momentarily if an oversized piece of foreign material reaches them. The pellets inlet is centered over the rolls in order to get an even flow of product. When needed, the cylinders move one roll back to allow an internal by-pass of the crumbler.

Models	HP	Overall Dimensions (in)	Max Capacity MTPH
ES-960	15	76 x 89 x 22	15
ES-1260	25	82 x 90 x 24	19
ES-1272	30	82 x 102 x 24	25
ES-1272H	40	82 x 102 x 24	30

Standard manual gap setting

Optional remote gap setting

Optional rotary pocket feeder

LIMITED GUARANTEE

Law-Marot guarantees the equipment for one full year following the date of delivery for labor and two full years for parts. (With the exclusion of wear parts: screens, belts, de-blinding roller assemblies. Motors and reducers are subject to their manufacturer's guarantee policy.)
